

$$\partial: \phi_{\mathcal{A}} \partial \bar{x} \quad \bar{x} \quad \bar{x}$$

## Notes

- 1) Is the count of Hareg dots, ረ , critical?
- 2) Review spacing to the right of numerals.
- 3) Number bars perhaps should be completely horizontal to reflect writing, . By design the bars use the modern slope ሸ , and parallel the tops of numeral glyphs.
- 4) In some cases ሸ appears as 4 equal sized dots, for example  , is preserving this appearance important?
- 5) "Corrections", for example  becoming ሸ፡ ተወግዘቱንም፡ , could have remained unchanged to preserve the defect in the manuscript.
- 6) Is preserving the triangular head of ግ (see above sample) as a variant desirable?
